

NOAM MOSKOWITZ

FULL STACK SOFTWARE ENGINEER

054-6107337 | noammz101@gmail.com | [LinkedIn](#) | [Github](#) | [Portfolio](#)

SUMMARY Full Stack Software Engineer with a focus on architecting **scalable data pipelines** and modernizing legacy infrastructures. Currently serving as the **sole technical lead** for a production platform, managing the end-to-end migration to **Nuxt 3** and engineered **vendor-agnostic data layers**. Proven ability to deliver **production-ready** ecosystems using **React, React Native, Vue**, and **AWS Serverless architectures**, with a strong emphasis on **cost-efficiency** and **system reliability**.

TECHNICAL SKILLS

- **Frontend Development:** React, React Native, Nuxt 3 (Migration Specialist), Vue.js, TypeScript.
 - **UI & Design:** Tailwind CSS, Shadcn UI, Nuxt UI, Bootstrap, CSS3, HTML5.
 - **Backend & Cloud:** AWS (Lambda, API Gateway), Node.js, Express.js, Webhooks.
 - **Data & Databases:** MongoDB, Mongoose, Redis, Data Ingestion Pipelines
 - **Tools & State Management:** Redux, Zustand, React Query, Git, Vite, JWT Authentication.
-

EXPERIENCE

Lead Software Engineer | Montrose FX | Jan 2025 - Present

- **Lead Architect & Sole Developer:** Driving the full-stack evolution and infrastructure strategy as the sole technical lead. responsible for all architectural decisions, deployments, and vendor integrations.
 - **Engineered an Agnostic Data Layer:** Architected a custom data ingestion pipeline using Webhooks to migrate data from a restrictive third-party provider into an in-house MongoDB ecosystem.
 - **Eliminated Vendor Lock-in:** Strategic decoupling from a single data source, enabling the company to integrate multiple third-party providers simultaneously and significantly increasing system scalability.
 - **Legacy Modernization:** Spearheaded the migration from Nuxt 2 to Nuxt 3, resulting in a 0-regression transition, faster build times, and a highly responsive, modern user interface.
 - **Infrastructure Ownership:** Managed the end-to-end reliability of the platform, ensuring high availability and data integrity while maintaining a streamlined, modern TypeScript codebase.
-

Full Stack Developer | Avihu Busheri Fit - Avihu Team | May 2024 - Present

- **Full-Cycle Product Launch:** Co-developed and launched a production-ready fitness ecosystem consisting of a React Native mobile app, a React admin portal, and a serverless backend.
- **Serverless Infrastructure:** Built and deployed a scalable API layer using AWS Lambda and API Gateway, integrated with MongoDB to handle real-time user workout data and biometric tracking.

- **Process Automation:** Developed a custom Plan Template Engine that allows the client to generate diet and workout plans 80% faster, eliminating manual "from-scratch" builds for every new user.
- **User Engagement:** Released the app to an initial cohort of 100+ active users, maintaining high performance and positive feedback through iterative feature updates and performance tuning.
- **Cross-Platform Architecture:** Managed three distinct repositories to ensure seamless synchronization between the trainer's admin tools and the client's mobile experience.

PROJECTS

Final Project: Premium Cars | HackerU (Grade: 100)

Developed a full-stack car rental platform enabling admins to manage cars and branches and customers to book rentals online with flexible pickup/drop-off options.

Backend: Node.js, Express.js, Mongoose, bcrypt, JWT, Joi, CORS.

Frontend: React (TypeScript), Tailwind CSS, Shadcn UI, Redux, React Query, Axios, React Hook Form, Vite, Zod.

Built from scratch, showcasing proficiency in modern JavaScript/TypeScript frameworks and tools.

Final Front-End Project: B Card Platform | HackerU (Grade: 100)

Developed the front end of a business card platform, enabling users with the correct credentials to publish virtual business cards for public viewing. Improved skills in JavaScript, React, front-end validation, and creating reusable React components.

Final Back-End Project: B Card Platform | HackerU (Grade: 100)

Built the back end for a business card platform, handling user authentication, back-end validation, token use, and authorization-level programming using MongoDB. Gained expertise in back-end security and database management.

EDUCATION

Full Stack Web Developer , 535H - HackerU

May 2023 - Jul 2024

Specialized in JavaScript technologies, including **React**, **Node.js**, **TypeScript**, and **MongoDB**.

GPA: 99.6 (Outstanding project grades).

SERVICE

Golani Infantry Soldier | 2019-2022

Served as a combat soldier and commander in the Golani Infantry Brigade, leading and managing operational tasks in high-pressure environments.
