

Noam Moskowitz

Software Engineer (Full Stack) - Payments & Platform

Israel | noammz101@gmail.com | 054-610-7337 | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

SUMMARY

Full-stack software engineer with a backend and platform focus and hands-on experience building **B2B and B2C FX and payments systems** in a **regulated fintech environment**. Experience spans transaction processing, payment controls, security, observability, infrastructure, and frontend development. Comfortable owning features and systems **from design through production** and translating operational and compliance requirements into working software.

SKILLS

Languages & Frameworks: TypeScript, JavaScript, Node.js, Nuxt 3, Vue, React, React Native, Expo, Vitest

Backend & Data: MongoDB, Mongoose, Redis, BullMQ, REST APIs, Webhooks, Zod

Cloud & Infrastructure: AWS, DigitalOcean, Docker, Cloudflare, CI/CD, GitHub Actions, OpenSearch

Fintech & Integrations: FX & Payments, Currencycloud, Sumsb, KYC/AML Integrations, Transaction Processing

Security & Reliability: JWT & Session Authentication, Authorization, Rate Limiting, Audit Logging, Idempotency, Backup & Disaster Recovery, Observability

EXPERIENCE

Montrose FX - International Payments

Jan 2025 - Present

Software Engineer (Full Stack) - Payments & Platform | [Live Platform](#)

- **Own the architecture, development, security, and production operation** of a **B2B and B2C FX and payments platform**, translating requirements from compliance, the CISO, company auditor, penetration testers, and operations into end-to-end technical controls supporting the company's **ISA licensing process**.
- **Architected a financial-data ingestion platform** using **TypeScript, Node.js, Redis, BullMQ, MongoDB, and Currencycloud**, normalizing provider-specific transaction lifecycles into an internal financial model. Built **idempotent, retryable processing** that refetches current provider state, safely handles repeated lifecycle events, tracks processing stages, and supports automated and operator-triggered recovery through the same pipeline.
- **Designed critical payment correctness and regulatory controls** for a multi-user financial platform, including multi-currency compliance-limit calculations, **account-level locking** to prevent concurrent payments from bypassing regulatory thresholds, server-side idempotency protection, granular payment permissions, and **maker-checker approval workflows** for customer users and privileged internal operators.
- **Re-architected application security and authorization** by replacing frontend-dependent controls with **centralized server-side route policies**, query-level tenant ownership enforcement, and systematic **IDOR prevention**. Introduced hybrid **JWT + revocable server-side sessions**, application-wide and authentication-specific rate limiting, account-enumeration and timing-attack mitigations, and Cloudflare-enforced origin protection.

Montrose FX - International Payments (continued)

- **Built the platform's observability, audit, backup, and disaster-recovery architecture** from the ground up, including request-scoped correlation IDs, third-party and worker lifecycle tracing, privileged-action logs with actor, target, and before/after state, centralized retention across Better Stack and OpenSearch, and immutable database/log backups in **AWS S3 Object Lock Compliance Mode** with two-year retention. Authored the recovery policy and validated full application and database recovery into a new region in **26 minutes against a 30-minute RTO**.
- **Established production engineering and SDLC controls** including isolated staging and production environments, protected GitHub branches, mandatory pull requests and status checks, automated linting/testing, **CI/CD workflows**, Slack visibility for test and backup outcomes, and operational tooling that enables staff to inspect, approve, reconcile, and recover financial operations without direct developer or database intervention.

Avihu Team

May 2024 - Jun 2026

Full Stack Developer | iOS | Android

- **Delivered production features end to end** across a **React Native mobile app, React admin platform, and AWS-based backend services**, taking client requirements from initial discussion through API design, data modeling, implementation, and deployment.
- **Built and shipped a production React Native application** for iOS and Android and developed a **reusable custom component system** from designer specifications, creating shared UI primitives from scratch for consistent use across the product.
- **Collaborated directly with the client and a development partner** to scope features, translate business needs into technical requirements, and deliver functionality across **mobile, frontend, and backend layers**.

EDUCATION

The Open University of Israel

2026 - Present

B.Sc. Computer Science with a Specialization in Cybersecurity

HackerU

May 2023 - Jul 2024

Full Stack Web Development - 535-Hour Program
